

10	Generate the Assembly Language code for the optimal intermediate code of the expression given in Q.9.	CO6	L6
----	---	-----	----

Course Outcomes	By the end of the course, through lectures, readings, home works, assignments, and exams, students will be able to:	
	CO1	Summarize the overview of programming languages, language processors and the structure of a compiler
	CO2	Acquire knowledge in theory of computation and their role in designing different types of tokens generated by lexical analyzer
	CO3	Demonstrate the role of Parser(s) (LL, SLR, CLR and LALR) and its types i.e. Top-down and Bottom-up parsers.
	CO4	Apply and evaluate syntax directed translation schemes, synthesized attributes, inherited attributes, and different techniques for symbol table organization
	CO5	Analyze the generation of various intermediate codes and the process of their optimization.
	CO6	Examine the target machine's run time environment, and its instruction set for code generation and techniques used for code optimization

- ✓ Assignment scores/markings depend on neatness and clarity.
- ✓ Plagiarized assignments will be given a zero mark.
- ✓ Submit the hard copy of your assignment by the due date.
- ✓ Submit the assignment handwritten on A4 size papers and spiral bound to your CPTT class teacher. A front page must be present containing the details of the subject, the assignment and the student.
